1

Supplier's name and model identifier.

2

Energy efficiency indicator for an average climate. A better energy class can be achieved in some units when they are equipped with external humidity or CO₂ sensors used for demand control.

3

Maximum air flow rate in m³/h at 100 Pa external pressure.

4

Sound power level. A-weighted sound power level at reference airflow at 50 Pa. (reference airflow = 0.7 x maximum airflow (3)).
